

Construction administration and inspection service for the management of all of your infrastructure projects

Construction administration and inspection can be a challenge without the proper tools. Remote job sites, shifting requirements and numerous points of contact are only a few of the variables that can quickly cause a project to derail. Keeping things on track is easier than ever with the Appia® Construction Administration and Inspection service. This **web-based, mobile accessible service** standardizes processes and keeps all project managers, inspectors and other stakeholders on target by providing real time, up-to-date contract data from any Internet-enabled location.

Inspectors can monitor site activities **in real-time**, while project managers and other project stakeholders can offer immediate feedback on **change orders, pay estimates, daily reports, materials** and much more. **Detailed reporting** allows for thorough tracking of project status, and the **built-in audit trail** offers fast access to historical data on any project. The intuitive interface makes the Appia service easily adoptable by users of all skill levels.

Keep your inspectors in the field. Spend **more** time making construction administration decisions and **less** time searching for project data by implementing the **Appia service**.

KEY BENEFITS

- Allows for real-time project access and source data entry via a web-based, hosted environment
- Daily Reporting including site conditions, prime and sub workforce, item postings and locations and attachments
- Provides material tracking - including certifications and usage
- Allows for multiple funding source administration and reporting
- Provides an audit trail
- Produces contractor estimates
- Prepares built-in PDF reports, including item history to date
- Handles change orders
- Scales to item-based projects of all sizes
- Grants read-only access to clients and external stakeholders
- Offline access via the Info Tech Mobile Inspector™ app

"As a manager during the construction season, I am seldom at my desk. Having the ability to access my projects from anywhere allows continued seamless management of the project."

Gregory J. Fehrman, P.E., LEED-AP, Manager, Construction Services
C&S Engineers, Inc., Syracuse, New York

"The Appia [service] allows us to be more efficient because we are able to keep inspectors in the field more, and provide the client with up-to-date information that they can access at their convenience. The work the Appia [service] saves is equivalent to about one staff person."

Chris Sweat, Construction Manager
Smith Seckman Reid, Inc., Nashville, Tennessee
