

Using either a tablet or smartphone, field inspectors can use the **Mobile Inspector[®]** app to collect the data required to prepare a daily work report, all while at the job site. It works both online or offline, and combined with the **AASHTOWare Project SYNC Service[™]**, provides a simple, secure and seamless transfer of data directly from the field. This allows inspectors to remain in the field, focused on the job, not in the office.

The Mobile Inspector app has been available for only a year and already nine Transportation Agencies and many local agencies and consulting firms are currently in production, with others evaluating. The feedback from the user community has been positive, and shows benefits such as:

- ✓ **Ease of Use** - Mobile Inspector is a simple tool, requiring little or no training
- ✓ **Field Record Keeping** - Mobile Inspector allows inspectors to easily track item progress, contractor workforce, photos, and site conditions, all directly from the field
- ✓ **Keep Inspectors Inspecting** - Inspectors no longer need to travel to the office or field trailer, or access their computer, to send and receive up-to-date contract information
- ✓ **Secure Contract and Daily Report Data Transfer** - Mobile Inspector uses the AASHTOWare Project SYNC Service to transfer contract data automatically and securely between the app and the agency's construction management system
- ✓ **Same App for Multiple Construction Systems** - Get a jump on the implementation of AASHTOWare Project Construction & Materials[™] by starting to use Mobile Inspector. Mobile Inspector works with multiple construction systems, so your inspectors will not need additional training, nor have to spend time away from the field
- ✓ **Work Online or Offline** - the AASHTOWare Project SYNC Service provides a secure, seamless data transfer, either at the time the data is entered if there is an Internet connection, or later, as soon as an Internet connection becomes available
- ✓ **Streamline Project Communication** - live project information is now accessible to Inspectors, Project Managers, and other project stakeholders anytime, anywhere

Additionally, the use of **Mobile Inspector** combined with the **AASHTOWare Project SYNC Service** contributes to an agency's e-Construction initiative by providing mobile devices, software and applications for field inspection and data collection.
